

Name \_\_\_\_\_

**3.OA.A.1**  
Represent and solve problems involving multiplication and division.

Name \_\_\_\_\_

1. Alondra makes 4 necklaces. She uses 5 beads on each necklace. Which number sentence could be used to find the number of beads Alondra uses?

$$\begin{array}{l} \text{Ⓐ } 4 \times 5 = \blacksquare \\ \text{Ⓑ } 4 + 4 + 4 + 4 = \blacksquare \\ \text{Ⓒ } 5 + 5 + 5 + 5 + 5 = \blacksquare \\ \text{Ⓓ } 5 + 4 = \blacksquare \end{array}$$

2. A waiter carried 6 baskets with 5 dinner rolls in each basket. How many dinner rolls did he carry?  
Show your work.

**30** dinner rolls

3. Lucy and her mother made tacos. They put 2 tacos on each of 7 plates.

Select the number sentences that show all the tacos Lucy and her mother made. Mark all that apply.

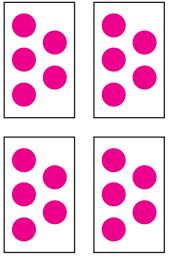

$$\begin{array}{l} \text{Ⓐ } 2 + 7 = 9 \\ \text{Ⓑ } 7 + 7 = 14 \\ \text{Ⓒ } 8 + 6 = 14 \\ \text{Ⓓ } 2 \times 7 = 14 \end{array}$$

Name \_\_\_\_\_

4. A bookcase has 4 shelves. Each shelf holds 5 books.

How many books are in the bookcase?

Draw counters to model the problem. Then explain how you solved the problem.

**20 books; Possible explanation: I drew 5 counters in each group, and then I skip counted by 5s. 5, 10, 15, 20**

5. Carlos spent 5 minutes working on each of 8 math problems. Which number sentence shows the total number of minutes Carlos spent on the math problems?

$$\begin{array}{l} \text{Ⓐ } 8 \times 8 = 64 \\ \text{Ⓑ } 7 + 6 = 13 \\ \text{Ⓒ } 5 + 8 = 13 \\ \text{Ⓓ } 5 \times 8 = 40 \end{array}$$

6. There are 3 boats on the lake. Six people ride in each boat. How many people ride in the boats? Draw circles to model the problem and explain how to solve it.

**18** people

Possible explanations: Students may count the number of circles, add  $6 + 6 + 6$ , or multiply  $3 \times 6$ .

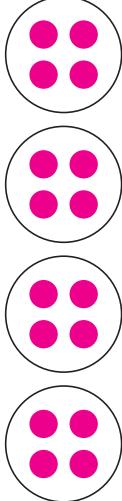

Name \_\_\_\_\_

**Practice Test****3.OA.A.2***Represent and solve problems involving multiplication and division.*

1. The coach separated the 18 players at lacrosse practice into 3 different groups. How many players were in each group?

\_\_\_\_\_ players

2. Tyrone took 16 pennies from his bank and put them in 4 equal stacks. How many pennies were in each stack? Show your work.

\_\_\_\_\_ pennies

3. Darius bakes 18 muffins for his friends. He gives each of his friends an equal number of muffins and has none left over.

**Part A**

Draw a picture to show one way that Darius could have divided the muffins and complete the sentence.

**Check students' work. Answers may vary.**

- Darius gave muffins to **Possible answers: 2, 3, 6, 9, or 18** friends. Could Darius have divided all of his muffins equally among 4 of his friends? Explain why or why not.

**Possible explanation:** No, 18 cannot be divided into 4 **groups of whole muffins with none left over.**

Name \_\_\_\_\_

4. A workbook is 64 pages long. If each chapter is 8 pages long, how many chapters are there?

\_\_\_\_\_ chapters

5. Elizabeth has 12 horses on her farm. She puts an equal number of horses in each of 3 pens. How many horses are in each pen?

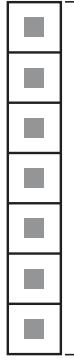

Circle a number that makes the sentence true.

4

There are 9 horses in each pen.

36

6. There are 7 cars in an amusement park ride. There are 42 people divided equally among the 7 cars. How many people ride in one car?

42 people

\_\_\_\_\_ people

7. There were 40 fingers total on the number of gloves Mrs. Edwards knitted. How many gloves did Mrs. Edwards knit?

40 fingers

\_\_\_\_\_ gloves

**Practice Test**

**3.OA.A.3**  
Represent and solve problems involving multiplication and division.

1. José buys 6 bags of flour. Each bag weighs 5 pounds. How many pounds of flour did José buy?

$$30 \text{ pounds}$$

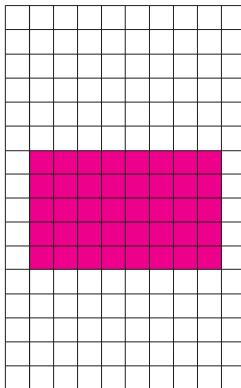

2. Marissa is buying a new rug. The rug is 8 feet long and 4 feet wide. What is the area of the rug?

$$8 \times 4 = 32 \text{ square feet}$$

3. Ana used 49 strawberries to make strawberry smoothies. She used 7 strawberries in each smoothie. How many strawberry smoothies did Ana make?

$$7 \text{ strawberry smoothies}$$

4. Chris plants 40 pumpkin seeds in 5 equal rows. How many seeds does Chris plant in each row? Make an array to represent the problem. Then solve the problem.

Name \_\_\_\_\_

5. Mrs. Ruiz sorted spools of thread into 6 boxes. Each box holds 6 spools. How many spools of thread does Mrs. Ruiz have?

Draw circles to model the problem. Then solve. Explain how you solved the problem.

**36 spools; Possible explanations: Students may multiply  $6 \times 6$ , count by sixes, or multiply  $2 \times 6 = 12$  and triple the product.**

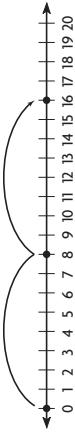

6. Ming's garden has an area of 35 square feet. The length of the garden is 7 feet. What is the width of Ming's garden?

$$35 \div 7 = a$$

$$7 \times a = 35$$

- (A) 4 feet  
(B) 5 feet  
(C) 6 feet  
(D) 7 feet

7. Lindsay went hiking for two days in Yellowstone National Park. The first jump on the number line shows how many birds she saw the first day. She saw the same number of birds the next day.

Write the multiplication sentence that the number line shows.

$$2 \times 8 = 16$$

**3.OA.A.4**  
Represent and solve problems involving multiplication and division.

1. In which number sentence is the unknown factor  $n$ ? Mark all that apply.

- (A)  $4 \times \square = 32$   
 (B)  $\square \times 6 = 36$   
 (C)  $8 \times \square = 49$   
 (D)  $\square \times 3 = 18$

2. Devon has 80 books to pack in boxes. She packs 10 books in each box. How many boxes does she need?

Write an equation using the letter  $n$  to stand for the unknown factor. Explain how to find the unknown factor.

**$n \times 10 = 80$ . Possible explanation: I can draw an array of**

**80 squares with 10 squares in each row. There are 8 rows,**

**so  $n = 8$ . Devon needs 8 boxes.**

3. Circle the unknown factor and quotient.

$$8 \times \boxed{6} = 48$$

$$\quad\quad\quad \boxed{7} = 48 \div 8$$

$$\quad\quad\quad 8$$

4. Keith arranged 40 toy cars in 8 equal rows. How many toy cars are in each row?

$$\underline{\quad 5 \quad}$$
 toy cars

Practice Test

7

Name \_\_\_\_\_

5. The camping club wants to rent rafts. Each raft can hold 8 people. Which equation could be used to find how many rafts are needed for 32 people?

- (A)  $8 \times 32 = \square$   
 (B)  $32 \times \square = 8$   
 (C)  $\square \times 8 = 32$   
 (D)  $32 \times 8 = \square$

6. Which number makes the equation true?

$$36 \div 4 = \square$$

- (A) 32  
 (B) 16  
 (C) 13  
 (D) 9

7. Write the number that makes the equation true.

$$6 \times \underline{\quad 4 \quad} = 24$$

Practice Test

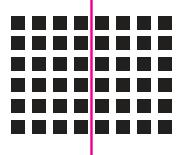

8

Name \_\_\_\_\_

Name \_\_\_\_\_

**3.OA.B.5**  
 Understand properties of multiplication and the relationship between multiplication and division.

1. Break apart the array to show  $8 \times 6 = (4 \times 6) + (4 \times 6)$ .

2. Nadia has 4 sheets of stickers. There are 8 stickers on each sheet. She wrote this number sentence to represent the total number of stickers she has.

$$4 \times 8 = 32$$

What is a related number sentence that also represents the total number of stickers she has?

- (A)  $8 + 4 =$
- (B)  $4 + 4 + 4 + 4 =$
- (C)  $8 \times 8 =$
- (D)  $8 \times 4 =$

3. Make true equations. Select a number to complete the equation.

0	1	7
---	---	---

$$7 \div 7 = \underline{1}$$

$$7 \div 1 = \underline{7}$$

$$0 \div 7 = \underline{0}$$

1. Philip has 30 pennies that he exchanges for nickels. He exchanges 5 pennies for each nickel. How many nickels does Philip get?

Ring equal groups to model the problem.

**6** nickels

2. There are 56 apples packed in 7 baskets with the same number of apples in each basket. How many apples are in each basket? Explain how you found your answer.

**8 apples; Possible explanation: I divided 56 by 7 to find how many apples are in each basket.**

3. There are 35 prizes in 5 equal rows. How many prizes are in each row?

Complete each equation to represent the problem.

$$5 \times \underline{7} = 35 \quad 35 \div 5 = \underline{7}$$

**7** prizes

6. Penn has 18 eggs to use in some recipes. Select a way that he could divide the eggs equally among some recipes. Mark all that apply.

- A 6 eggs in each of 3 recipes
- B 5 eggs in each of 3 recipes
- C 9 eggs in each of 2 recipes
- D 4 eggs in each of 4 recipes
- E 3 eggs in each of 6 recipes

Name \_\_\_\_\_

3.OA.C.7  
Common Core State Standard  
Multiply and divide within 100.

Name \_\_\_\_\_

1. Bella made \$21 selling bracelets. She wants to know how many bracelets she sold. Bella used this number line.

Write the division equation that the number line represents.

$$21 \quad \div \quad 3 \quad = \quad 7$$

2. Etta buys some ribbon and cuts it into 7 pieces that are the same length. Each piece is 9 inches long. How long was the ribbon that Etta bought?

$$63 \quad \text{inches}$$

3. Complete the chart to show the quotients.

$\div$	27	36	54	45
9	3	4	6	5

4. Use the numbers to write related multiplication and division facts.

9	45	5
---	----	---

$$\underline{9 \times 5 = 45; 45 \div 5 = 9; 5 \times 9 = 45; 45 \div 9 = 5}$$

Name \_\_\_\_\_

5. Each picnic table seats 6 people. How many picnic tables are needed to seat 24 people? Explain the strategy you used to solve the problem.

4 picnic tables; Possible explanation: I used the related multiplication fact  $6 \times 4 = 24$ .

6. Circle the symbol that makes the multiplication sentence true.

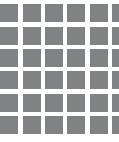

$9 \times 6$	<input checked="" type="radio"/> $\checkmark$	$3 \times (3 \times 9)$
	=	

7. Select the equations that represent the array. Mark all that apply.

- $3 \times 5 = \square$
- $5 \times \square = 15$
- (B)  $2 \times \square = 12$
- (E)  $12 \div 3 = \square$
- $\square \div 3 = 5$
- $15 \div 5 = \square$

8. Write related facts for the array. Explain why there are not more related facts.

$6 \times 6 = 36; 36 \div 6 = 6$ ; Possible explanation: there are only two equations because both factors are the same.

Practice Test

Name \_\_\_\_\_

**3.OA.D.8**  
Solve problems involving the four operations, and identify and explain patterns in arithmetic.

1. Seth collected 24 toy cars. Then he gave away 3 toy cars to each of his 5 friends. How many toy cars does Seth have left? Explain how you solved the problem.

**9; Possible explanation:** First, I multiplied  $3 \times 5 = 15$  to find the number of cars Seth gave away. Then I subtracted 15 from 24 and got 9, so there are 9 toy cars left.

2. Mrs. Garcia puts 57 cans on a shelf. She puts an equal number of cans in each of 9 rows and puts 3 cans in the last row. How many cans does she put in each of the 9 equal rows?

Choose the equation that can be used to solve the problem.

$$(3 \times c) + 9 = 57$$

$$(9 \times c) + 3 = 57$$

$$(57 \div 9) + 3 = c$$

I can use the equation

Solve the problem.

**Check students' work.**

**6** \_\_\_\_\_ cans

Name \_\_\_\_\_

3. Bella is planning to write in a journal. Some pages will have 1 journal entry on them, and other pages will have 2 journal entries on them. If Bella wants to make 10 entries, how many different ways can she write them in her journal?

**4 different ways;**  $(2 \times 4) + (1 \times 2) = 10$ ;  $(2 \times 3) + (1 \times 4) = 10$ ;  $(2 \times 2) + (1 \times 6) = 10$ ;  $(2 \times 1) + (1 \times 8) = 10$

4. Brian is going camping in 2 weeks and 2 days.

Which equation can be used to find the number of days until Brian goes camping?

- (A)  $2 + 7 + 2 = c$ ;  $c = 11$  days  
 (B)  $2 \times 7 - 2 = c$ ;  $c = 12$  days  
 (C)  $2 \times 5 + 2 = c$ ;  $c = 12$  days  
 (D)  $2 \times 7 + 2 = c$ ;  $c = 16$  days

5. Eleni bought 3 packs of crayons. She then found 3 crayons in her desk. Eleni now has 24 crayons. How many crayons were in each pack she bought? Explain how you solved the problem.

**Possible explanation:** First, I subtracted  $24 - 3 = 21$ . Then I divided 21 by 3 and got 7, so there were 7 crayons in each pack.

1. There are 486 books in the classroom library. Complete the chart to show 486 rounded to the nearest 10.

Hundreds	Tens	Ones
4	9	0

2. Write each number sentence in the box below the better estimate of the sum.

$$\begin{array}{r} 393 + 225 = \square \\ 352 + 328 = \square \end{array}$$

$$\begin{array}{r} 481 + 215 = \square \\ 309 + 335 = \square \end{array}$$

600	700
<b>309 + 335 =</b> <span style="background-color: pink;">481 + 215 =</span>	<span style="background-color: pink;">352 + 328 =</span>
<b>393 + 225 =</b>	

3. Select the numbers that round to 300 when rounded to the nearest hundred. Mark all that apply.

- (A) 238  
 (B) 250  
 (C) 283  
 (D) 342  
 (E) 359

4. A total of 907 people went to a fishing tournament. Of these people, 626 arrived before noon. Alina estimates that fewer than 300 people arrived in the afternoon. How did she estimate? Explain.

- Possible explanation:** She rounded to the nearest hundred.  
**First, she rounded 907 to 900 and rounded 626 to 600;**  
**then, she subtracted, 900 - 600 = 300.**

Name \_\_\_\_\_

5. Select the numbers that round to 100. Select all that apply.

- (A) 38  
 (B) 162  
 (C) 109  
 (D) 83

6. Alex and Erika collect shells. The tables show the kinds of shells they collected.

Alex's Shells		Erika's Shells	
Shell	Number of Shells	Shell	Number of Shells
Scallop	36	Scallop	82
Jingle	95	Clam	108
Clam	115	Whelk	28

**Part A**

Who collected more shells? About how many more did she collect? Explain how you solved the problem.

**Alex; Possible explanation:** Estimate the number of shells Alex has (about 260) and Erika has (about 220).  
**Alex has about 40 more.**

**Part B**

Alex and Erika have the greatest number of what kind of shell? How many shells of that kind do they have in all? Show your work.

**clam shells; 223 shells**

## Practice Test

Name \_\_\_\_\_

## Practice Test

**3.NBT.A.2**  
Use place value understanding  
and properties of operations to perform  
multi-digit arithmetic.

Name \_\_\_\_\_

1. Daniel has 402 pieces in a building set. He uses 186 pieces to build a house. How many pieces does he have left? Show your work.

**216 pieces**

<b>Use the table for 2–4.</b>	
Susie's Sweater Shop	
Month	Number of Sweaters Sold
January	402
February	298
March	171

**Use the table for 2–4.**

Month	Number of Sweaters Sold
January	402
February	298
March	171

2. The table shows the number of sweaters sold online in three months. How many more sweaters were sold in January and February?

**700** sweaters

3. How many more sweaters were sold in January than in March?

**231** sweaters

4. How many more sweaters were sold in February and March than in January?

**67** sweaters

Practice Test

## Practice Test

Name \_\_\_\_\_

5. Janna buys 2 bags of dog food for her dogs. One bag weighs 37 pounds. The other bag weighs 15 pounds. How many pounds do both bags weigh? Explain how you solved the problem.

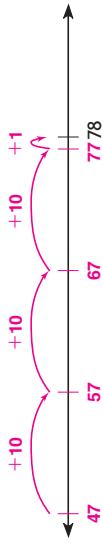

**52 pounds;** Possible explanation: Start with 37 and count on 3 to 40. Then add 15 as 1 ten 5 ones. Remember to subtract the 3 you counted on to start,  $5 - 3 = 2$ , so **52**.

6. Choose the property that makes the statement true.

The Identity Commutative Property of Addition states that  
**Associative**

you can group addends in different ways and get the same sum.

7. Alexandra has 78 e-mails in her inbox. She deletes 47 e-mails. How many e-mails are left in her inbox? Draw jumps and label the number line to show your thinking.

8. Luke solves this problem. He says the difference is 214. Explain the mistake Luke made. What is the correct difference?  
 $352 - 148 = \underline{\hspace{2cm}}$

Possible explanation: When Luke combined the tens and hundreds to subtract he should have combined the tens and ones. He needed to regroup 1 ten as 10 ones to subtract 48 from 52. Then he would have 0 tens 4 ones left. The difference is **204**.

Practice Test

<input checked="" type="radio"/> 24	<input type="radio"/> 24

6. Angelo rode his bike around a bike trail that was  $\frac{1}{4}$  of a mile long. He rode his bike around the trail 8 times. Angelo says he rode a total of  $\frac{8}{4}$  miles. Teresa says he is wrong and that he actually rode 2 miles. Who is correct? Use words and drawings to explain how you know.

**Both are correct. Possible explanation: The distance around the trail is  $\frac{1}{4}$  mile, so if he rode around it 8 times, that is eight fourths or  $\frac{8}{4}$ . I drew a circle, divided it in fourths, and shaded  $\frac{4}{4}$ . I then drew another circle and shaded it the same to show  $\frac{8}{4}$ . My drawing shows that  $\frac{8}{4} = 2$ , so he rode 2 miles.**

**5:52 P.M.**

4. Anthony's family went out to dinner. They left at 5:05 P.M. They returned home 47 minutes later.

What time did Anthony's family get home?

5. Jason and Alyssa went to the park. Jason left the park at 1:35 P.M. Alyssa left the park 45 minutes later. What time did Alyssa leave the park?

**2:20 P.M.**

6. A chicken dish needs to bake in the oven for 35 minutes. The dish needs to cool for at least 8 minutes before serving. Scott puts the chicken dish in the oven at 5:14 P.M.

Can Scott serve the dish at 5:51 P.M.? Explain how you know.

**No; Possible explanation: Scott takes the dish out of the oven at 5:49 P.M. Then he needs to let it cool for 8 minutes or until 5:57 P.M. before he can serve it.**

Name \_\_\_\_\_

Name \_\_\_\_\_

1. A large bottle of water holds about 2 liters.  
Which other container will hold all of the water?  
 A water glass  
 B ice cube tray  
 C large soup pot  
 D cereal bowl

2. Cara uses a balance scale to compare mass.

Circle a symbol that makes the comparison true.

<	>	=
---	---	---

The mass of the blocks  
erasers.

5. Amy has 30 grams of flour. She puts 5 grams of flour in each pot of potato soup that she makes. How many pots of potato soup can Amy make?

- A 3 pots  
 B 5 pots  
 C 6 pots  
 D 15 pots

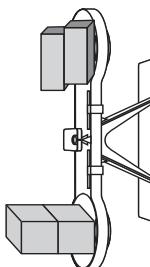

3. Select the items that would be best measured in grams.

Mark all that apply.

A watermelon  
 B lettuce leaf  
 C grape  
 D onion

4. Lucy fills a bathroom sink with water. Is the amount of water *more than 1 liter, about 1 liter, or less than 1 liter?*  
Explain how you know.
- More than 1 liter; Possible explanation: A liter is only about the amount in a medium bottle of water. That amount would not fill a sink, so the full sink has more than 1 liter.**

**3.MD.C.7b**  
 Geometric measurement: understand  
concepts of area and relate area to  
multiplication and division.

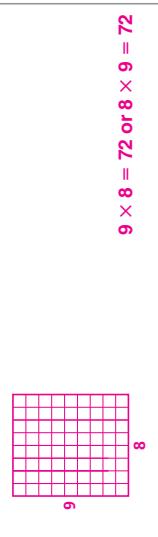

1. Elizabeth has a rectangular garden in her yard. The garden has a length of 8 feet and a width of 6 feet. What is the area of the garden?

$$48 \text{ square feet}$$

2. Raul makes a sign for the school fair. It has a length of 9 inches and a width of 8 inches. What is the area of the sign?

Draw a rectangle to help solve the problem. Label your drawing.

Write an equation to solve the problem.

$$\text{Area of the sign: } 72 \text{ square inches}$$

3. Lydia is knitting a blanket. The blanket will be 5 feet long and 4 feet wide. What will the area of the blanket be?

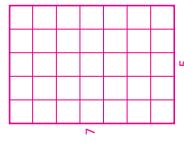

- (A) 24 square feet
- (B) 20 square feet
- (C) 15 square feet
- (D) 9 square feet

Name \_\_\_\_\_

4. Etta prints a photograph that is 7 inches long and 5 inches wide. What is the area of the photograph?

Draw a rectangle to help solve the problem. Label your drawing. Write an equation to solve the problem.

$$\text{Area of the photograph: } 35 \text{ square inches}$$

5. Find the pattern and complete the chart.

Total Area (in square feet)	50	60	70	80	90
Length (in feet)	10	10	10	10	10
Width (in feet)	5	6	7	8	9

How can you use the chart to find the length and width of a figure with an area of 100 square feet?

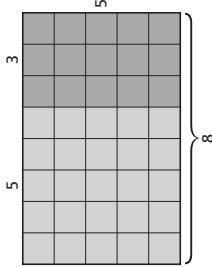

- Possible answer:** Extend the chart to 100 square feet and continue the pattern: length 10 feet, width 10 feet. The figure is a square.

3.MD.D.8

Geometric measurement; recognize perimeter as an attribute of plane figures and distinguish between linear and area measures.

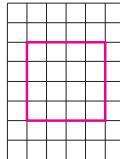

1. Kim wants to put trim around a picture she drew. How many centimeters of trim does Kim need for the perimeter of the picture?

24 centimeters

2. Yuji drew this figure on grid paper. What is the perimeter of the figure?

18 units

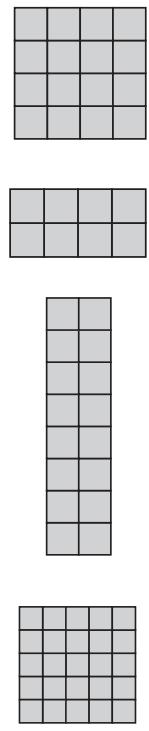

3. Shawn drew a rectangle that was 2 units wide and 6 units long. Draw a different rectangle that has the same perimeter but a different area.

**Drawings may vary.** Accept all rectangles with a perimeter of 16 units and an area that is not 12 square units. Possible drawing is shown.

Name \_\_\_\_\_

4. Which figure has a perimeter of 20 units and an area of 16 square units?

(A)

(B)

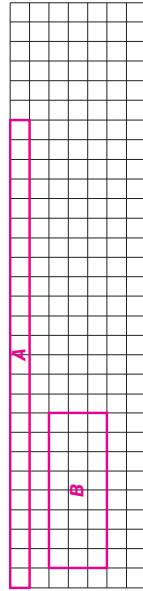

(C)

(D)

5. Anthony wants to make two different rectangular flowerbeds, each with an area of 24 square feet. He will build a wooden frame around each flowerbed. The flowerbeds will have side lengths that are whole numbers.

**Part A**

Each unit square on the grid below is 1 square foot. Draw two possible flowerbeds. Label each with a letter.

**Drawings will vary.** Accept any 2 rectangles that have an area of 24 square units each. Possible drawings are shown.

**Part B**

Which of the flowerbeds will take more wood to frame? Explain how you know.

**Perimeters will vary.** Possible explanation: Flowerbed A has a perimeter of 50 feet. Flowerbed B has a perimeter of 22 feet. So, Flowerbed A will take more wood to frame.

Name \_\_\_\_\_

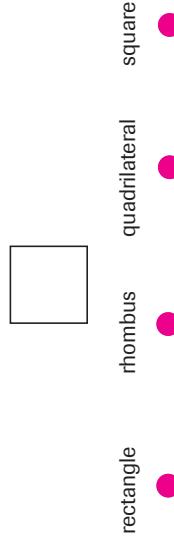

**3.G.A.1**  
Reason with shapes and their attributes.

Name \_\_\_\_\_

1. Which words describe this shape? Mark all that apply.

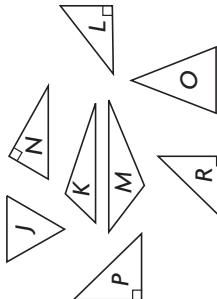

2. Which words describe this shape? Mark all that apply.

3. Write the name of each triangle where it belongs in the table. Some triangles might belong in both parts of the table. Some triangles might not belong in either part.

Has 1 Right Angle	Has at Least 2 Sides of Equal Length
L	J
N	O
P	P
R	R

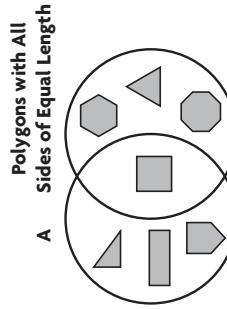

4. Circle a number or word from each box to complete the sentence to describe this shape.

2	3	4
right angles and	angles	less greater

There are **2** right angles and **4** **less greater**.

5. Rhea used a Venn diagram to sort shapes. What label could she use for circle A?

Possible answer: Polygons with Right Angles

6. Ava drew a quadrilateral with 2 pairs of opposite sides that are parallel. The shape has at least 2 right angles. Draw a shape that Ava could have drawn.

Possible answer shown. Student should draw either a square or other rectangle.

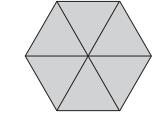

**Practice Test**

**3.G.A.2**  
Reason with shapes and their attributes.

Name \_\_\_\_\_

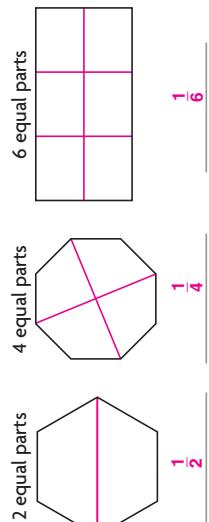

1. This hexagon has been divided into triangles with equal areas. What part of the area of the hexagon is the area of each triangle?

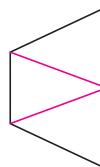

- (A)  $\frac{1}{2}$   
(B)  $\frac{1}{5}$   
**(C)  $\frac{1}{6}$**   
(D)  $\frac{6}{6}$

2. Divide each shape into the number of equal parts shown. Then write the fraction that describes each part of the whole.

**Possible divisions of the shapes are shown. Check students' work.**

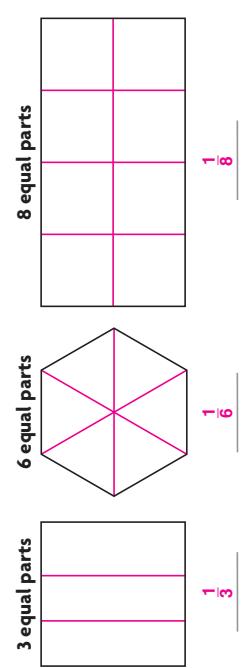

3. Victor drew lines to divide a trapezoid into equal parts that represent  $\frac{1}{3}$  of the whole area. Draw lines to show how Victor divided the trapezoid. **Possible answer shown.**

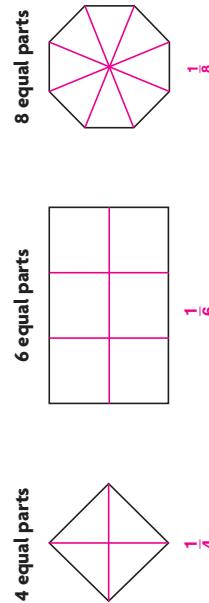

**Practice Test**

Name \_\_\_\_\_

4. Divide each shape into the number of equal parts shown. Then write the fraction that describes each part of the whole. **Possible divisions of the shapes are shown. Check students' work.**

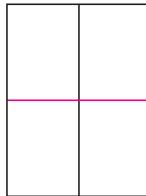

5. Divide each shape into the number of equal parts shown. Then write the fraction that describes each part of the whole.

**Possible divisions of the shapes are shown. Check students' work.**

6. Colette drew lines to divide a rectangle into equal parts that each represent  $\frac{1}{4}$  of the whole area. Her first line is shown. Draw to complete Colette's model.

**Possible answer shown.**
