

Practice Test

Name _____

Practice Test

5.O.A.1
 Write and interpret numerical expressions.

Name _____

1. Find the property that each equation shows.
 Write the equation in the correct box.

$$15 \times (7 \times 9) = (15 \times 7) \times 9$$

$$23 + 4 + 109 = 4 + 23 + 109$$

$$87 \times 3 = 3 \times 87$$

$$0 + 16 = 16$$

Identity Property of Addition	Commutative Property of Multiplication	Identity Property of Multiplication
0 + 16 = 16	87 × 3 = 3 × 87	1 × 9 = 9
Associative Property of Multiplication	Commutative Property of Addition	Associative Property of Addition
15 × (7 × 9) = (15 × 7) × 9	23 + 4 + 109 = 4 + 23 + 109	13 + (3 + 7) = (13 + 3) + 7

2. For numbers 2a–2b, select the correct value for the expression.

2a. $55 - (12 + 2)$, value:
 39 41 43

2b. $25 + (14 - 4) \div 5$, value:
 7 27 37

3. Carmine buys 8 plates for \$1 each. He also buys 4 bowls. Each bowl costs twice as much as each plate. The store is having a sale that gives Carmine \$3 off the bowls. Which numerical expression shows how much he spent?

- (A) $8 + [(4 \times 16) - 3]$
 (B) $8 + [4 \times (16 + 3)]$
 (C) $8 + [(4 \times 2) + 3]$
 (D) $8 + [(4 \times 2) - 3]$

Practice Test

Name _____

4. Valerie earns \$24 per hour. Which expression can be used to show how much money she earns in 7 hours?

- (A) $(7 + 20) + (7 + 4)$
 (B) $(7 \times 20) + (7 \times 4)$
 (C) $(7 + 20) \times (7 + 4)$
 (D) $(7 \times 20) \times (7 \times 4)$

5. Evaluate the numerical expression.

$$2 + (65 + 7) \times 3 =$$

218

6. Jackie followed these steps to evaluate the expression $15 - (37 + 8) \div 3$.

$$\begin{aligned} 37 + 8 &= 45 \\ 45 - 15 &= 30 \\ 30 \div 3 &= 10 \end{aligned}$$

Mark looks at Jackie's work and says she made a mistake. He says she should have divided by 3 before she subtracted.

Part A

Which student is correct? Explain how you know.

Mark; Possible answer: According to the order of operations, you should perform division before subtraction.

Part B

Evaluate the expression.

$$\begin{aligned} 37 + 8 &= 45 \\ 45 \div 3 &= 15 \\ 15 - 15 &= 0 \end{aligned}$$

Name _____

Practice Test
5.OA.A.2
Write and interpret numerical expressions.

1. An adult elephant eats about 300 pounds of food each day.
 Write an expression to represent the number of pounds of food a herd of 12 elephants eats in 5 days.

$$5 \times (300 \times 12)$$

2. Tara bought 2 bottles of juice a day for 15 days. On the 16th day, Tara bought 7 bottles of juice. Write an expression that matches the words.

$$(2 \times 15) + 7$$

3. Paul displays his sports trophies on shelves in his room. He has 5 trophies on each of 3 shelves and 2 trophies on another shelf. Write an expression to represent the number of trophies Paul displays.

$$(5 \times 3) + 2$$

4. Peter ran 3 miles a day for 17 days. On the 18th day, Peter ran 5 miles. Write an expression that matches the words.

$$(3 \times 17) + 5$$

Name _____

Practice Test

5.OA.B.3

Analyze patterns and relationships.

1. The table shows two sequences of numbers.

Day	1	2	3	4	5
Number of T-shirts sold	5	10	15	20	25
Amount earned (\$)	20	40	60	80	?

For numbers 1a–1b, choose the correct values to describe how one sequence is related to the other.

90	100
120	

- 1a. The unknown number in Day 5 is 100.
 1b. The rule that describes how the number of T-shirts sold relates to the amount earned is add 15 multiply by 5 (multiply by 4).

2. Jawan made a table to figure out how much he earns at his job.

Job Earnings						
Week	1	2	3	4	...	6
Hours Worked	6	12	18	24	...	36
Amount Earned (\$)	54	108	162	216	...	?

Part A

Write a rule that relates the amount Jawan earns to the number of hours worked. Explain how you can check your rule.

Possible answer: The rule is multiply by 9. I can check by multiplying the number of hours worked each day by 9. The product will equal the amount earned in the table.

Part B

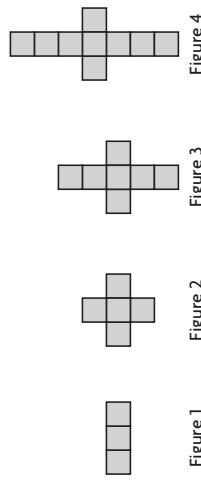

How much does he earn from his job by the end of Week 6?

\$ 324

Name _____

Practice Test

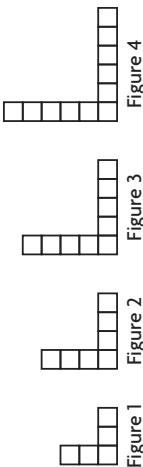

3. Look for a pattern.

- What is the rule? add 2
How many squares will there be in Figure 5? 11 squares

4. Steven is buying a new mountain bike on layaway for \$272. If he pays \$34 each week, how many weeks will it take Steven to pay for the bike? How can making a table help you solve the problem?

8 weeks; Possible explanation: I can make a table that shows how much Steven pays each week and the totals until I reach \$272.

5. Look for a pattern.

- What is the rule? add 2
How many squares will there be in Figure 5? 13 squares

Name _____

5.NBT.A.2
Understand the place value system.

Name _____

1. The table shows the equations Ms. Valez discussed in math class today.

Equations

$6 \times 10^0 = 6$
$6 \times 10^1 = 60$
$6 \times 10^2 = 600$
$6 \times 10^3 = 6,000$

Explain the pattern of zeros in the product when multiplying by powers of 10.

Possible explanation: For each power of ten, the number of zeros written after the base is the same as the number in the exponent.

4. Nicole is making 1,000 bows for people who donate to the library book sale. She needs a piece of ribbon that is 0.75 meter long for each bow. How many meters of ribbon does Nicole need to make the bows? Explain how to find the answer.

750 meters; Possible explanation: Multiply 1,000 by 0.75 by moving the decimal point 3 places to the right.

5. Rita is hiking along a trail that is 13.7 miles long. So far she has hiked along one-tenth of the trail. How far has Rita hiked?

1.37 miles

6. Use the numbers on the tiles to write the value of each expression. You can use a tile more than once or not at all.

$35.5 \div 10^0 =$	35.5
$35.5 \div 10 =$	3.55
$35.5 \div 10^2 =$	0.355

7. Select other ways to express 10^4 . Mark all that apply.

- (A) 10×4
 (B) $10 + 4$
 (C) 1,000
 (D) 10,000
 (E) $10 + 10 + 10 + 10$
 (F) $10 \times 10 \times 10 \times 10$

Practice Test

5.NBT.A.3a Understand the place value system.

- 1.** What is the value of the underlined digit? Mark all that apply.

0679

- A 0.6
 B 0.06
 C $6 \times \frac{1}{10}$
 D six hundredths

2. Choose the value that makes the statement true.

In the number 1 025 the value of the digit 2 is

ones	tenths	hundredths	thousandths
------	--------	-------------------	-------------

3. What is the value of the underlined digit? Mark all that apply.

0500

-  eight hundredths
(E) $8 \times \frac{1}{10}$

- C eight tenths

4. What is the value of the underlined digit? Mark all that apply.

0.283

- $8 \times \frac{1}{100}$
 - eight hundredths

Practice Test

Name: _____

- 3.** Jasmine kept a record of how many miles she ran each week during one month.

Week	Distance (in miles)
Week 1	4.754
Week 2	4.752
Week 3	5.19
Week 4	5.75

Order the weeks from the fewest number of miles Jasmine ran to the greatest number of miles Jasmine ran.

Week 4	Greatest
Week 3	
Week 1	
Week 2	Least

- 2.** For numbers z_1 - z_2 , choose the symbol that makes the comparison true.

- 2a. sixteen hundredths $\frac{1}{10} + \frac{4}{100} = \frac{4}{100}$

2b. $3 \times \frac{1}{10} + 4 \times \frac{1}{100} + 8 \times \frac{1}{1,000}$ one and two tenths

$$3 \times 1 + 6 \times \frac{1}{10} + 4 \times \frac{1}{1,000}$$

- 5.** In which number is the value of the digit 5 greater? Write the number in the box.

25

25

3.514

1. Chaz kept a record of how many gallons of gas he purchased each day last week.

Day	Gas (in gallons)
Monday	4.5
Tuesday	3.9
Wednesday	4.288
Thursday	3.75
Friday	4.256

Order the days from least amount of gas Chaz purchased to greatest amount of gas Chaz purchased.

- 2.** For numbers z_1 - z_2 , choose the symbol that makes the comparison true.

Λ ∨ ∥

- one and two tenths

$$2b. \quad 3 \times \frac{1}{10} + 4 \times \frac{1}{100} + 8 \times \frac{1}{1,000}$$

∨

Name _____

5.NBT.A.4
Understand the place value system.

1. Which statements are correct? Mark all that apply.

- A 16.437 rounded to the nearest whole number is 16.
- B 16.437 rounded to the nearest tenth is 16.4.
- C 16.437 rounded to the nearest hundredth is 16.43.

2. Rafael bought 2.15 pounds of potato salad and 4.25 pounds of macaroni salad to bring to a picnic. Which statement is correct?

- A Rounded to the nearest whole number, Rafael bought 2 pounds of potato salad.
- B Rounded to the nearest whole number, Rafael bought 5 pounds of macaroni salad.
- C Rounded to the nearest tenth, Rafael bought 2.1 pounds of potato salad.
- D Rounded to the nearest tenth, Rafael bought 4.2 pounds of potato salad.

3. Michelle records the value of one Euro in U.S. dollars each day for her social studies project. The table shows the data she has recorded so far.

Day	Value of 1 Euro (in U.S. dollars)
Monday	1.448
Tuesday	1.443
Wednesday	1.452
Thursday	1.458

On which two days was the value of 1 Euro the same when rounded to the nearest hundredth of a dollar?

Monday and Wednesday

For which two weeks was the value of 1 British pound the same when rounded to the nearest hundredth of a dollar?

Weeks 2 and 4**Answer Key**

Week	Value of 1 British Pound (in U.S. dollars)
1	1.598
2	1.616
3	1.634
4	1.623

6. Trudy is going to London next summer. Each week, she records the value of one British pound in U.S. dollars. The table shows the data she has recorded so far.

Practice Test

Name _____

Practice Test

5.NBT.B.5
Perform operations with multi-digit
whole numbers and with decimals to
hundredths.

Name _____

1. It is 3,452 feet round trip to Craig's school. If he went to school 179 times this year, how many feet did he travel in all?

617,908 feet

2. Solve. Show your work

$$\begin{array}{r} 4,193 \\ \times \quad 381 \\ \hline \end{array}$$

1,597,533; Check students' work.

3. Jeannette eats an average of 2,125 calories each day for a year. In a 365-day year, what is the total number of calories Jeannette eats?

775,625 calories

4. For numbers 4a–4c, fill in the number that completes the equation.

4a. $1,205 \times 321 =$ **386,805**

4b. $1,362 \times 409 =$ **557,058**

4c. $1,181 \times 236 =$ **278,716**

Practice Test

Name _____

5. A large factory pays each new employee a salary of \$2,880 per month. The factory is hired to make a new product and needs to hire many new employees. Which statements are true? Mark all that apply.

- (A) 100 new employees will earn a total of \$28,880 in a month.
 (B) 111 new employees will earn a total of \$319,680 in a month.
 (C) 150 new employees will earn a total of \$432,000 in a month.
(D) 175 new employees will earn a total of \$650,400 in a month.

6. It is 1,325 feet from Kinsey's house to her friend Carlito's house. When she visits Carlito, she walks to his house and gets a ride home from Carlito's mom. How many feet does Kinsey walk to Carlito's house in 112 visits?

148,400 feet

7. Solve. Show your work

$$\begin{array}{r} 2,996 \\ \times \quad 743 \\ \hline \end{array}$$

2,226,028; Check students' work.

8. A machine can seal 179 envelopes in 1 minute. If there are 1,440 minutes in a 24-hour day, how many envelopes can the machine seal in 1 day?

257,760 envelopes**GO ON** **Practice Test****17****18**

Name _____

1. Jill wants to find the quotient. Use multiplication and the Distributive Property to help Jill find the quotient.

$$144 \div 8 = \boxed{18}$$

Multiplication $\boxed{18 \times 8 = 144}$

Distributive Property $(8 \times 10) + (8 \times 8) = \boxed{144}$

2. Choose the word that makes the sentence true.
The first digit in the quotient of $1,875 \div 9$

ones	
tens	
will be in the	place.
hundreds	
thousands	

3. Dana is making a seating chart for an awards banquet. There are 184 people coming to the banquet. If 8 people can be seated at each table, how many tables will be needed for the awards banquet?

23 tables

4. Which equation shows a correct quotient?

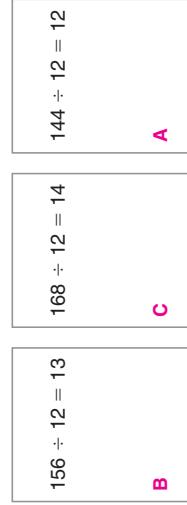

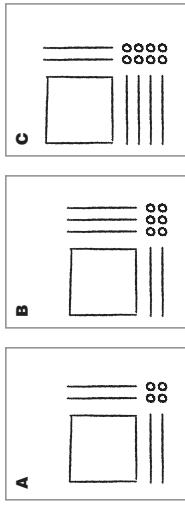

- A $225 \div 9 = 25$
- (B) $154 \div 8 = 22$
- (C) $312 \div 9 = 39$
- (D) $412 \div 2 = 260$

Name _____

5.NBT.B.6
Perform operations with multi-digit whole numbers and with decimals to hundredths.

5. Write the letter for each quick picture under the division problem it represents.

6. Divide 575 by 14 by using partial quotients. What is the quotient? Show your work.

Possible work shown.

$$\begin{array}{r} 14 \overline{)575} \\ \underline{-14} \\ 435 \\ \underline{-14} \\ 295 \\ \underline{-14} \\ 155 \\ \underline{-14} \\ 10 \\ \end{array} \quad \begin{array}{r} 10 \times 14 = 10 \\ \hline 10 \end{array}$$

Practice Test
5.NBT.B.7
*Perform operations with multi-digit
whole numbers and with decimals to
hundredths.*

Name _____

1. Clayton Road is 2.35 miles long. Wood Pike Road is 1.7 miles long. Kisha used a quick picture to find the combined length of Clayton Road and Wood Pike Road. Does Kisha's work make sense? Explain why or why not. Then find the correct length of the combined trails.

Yes. Possible explanation: She regrouped the 10 tenths as 1 one and added the 1 to the whole numbers. The combined length of the 2 trails is 4.05 miles.

2. A vet measured the mass of two birds. The mass of the robin was 76.64 grams. The mass of the blue jay was 81.54 grams. What was the difference in the masses of the birds?

4.9 grams

3. Ken and Leah are trying to solve a science homework question. They need to find out how much a rock that weighs 4 pounds on Earth would weigh on Venus. They know they can multiply the amount the rock weighs on Earth by 0.91 to find its weight on Venus. Select the partial products Ken and Leah would need to add to find the product of 4 and 0.91. Mark all that apply.

- (A) 0.95
 (B) 3.6
 (C) 3.65
 (D) 0.04
 (E) 0.36

Practice Test

Name _____

4. Write each number in a box next to the expression that has the same value. A number may be used more than once.

8.99

$29 \times 3.1 =$ **89.9**

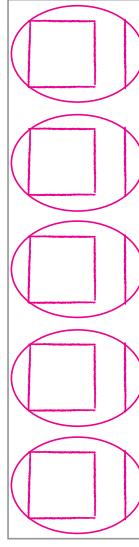

$0.29 \times 31 =$ **8.99**

$2.9 \times 31 =$ **89.9**

5. Melinda, Zachary, and Heather went to the mall to shop for school supplies. Melinda spent \$14.25 on her supplies. Zachary spent \$2.30 more than Melinda spent. Heather spent 2 times as much money as Zachary spent. How much did Heather spend on school supplies?

\$ **33.10**

6. Draw a model to show $5.5 \div 5$.

$5.5 \div 5 =$ **1.1**

7. Emma, Brandy, and Damian will cut a rope that is 29.8 feet long into 4 jump ropes. Each of the 4 jump ropes will be the same length. Write a division sentence to find the length of each rope.

29.8 ÷ 4 = 7.45

Practice Test

Name _____

Practice Test
5.NF.A.1
*Use equivalent fractions as a strategy
to add and subtract fractions.*

1. Write equivalent fractions for $\frac{2}{3}$ and $\frac{1}{3}$ that could be used to find the sum of the fractions.

Possible answers:
 $\boxed{\frac{6}{9}}$ and $\boxed{\frac{5}{15}}$

2. Jill brought $2\frac{1}{3}$ boxes of carrot muffins for a bake sale. Mike brought $1\frac{3}{4}$ boxes of apple muffins. What is the total number of boxes of muffins Jill and Mike brought to the bake sale?

$\frac{41}{12}$ boxes of muffins

3. Joshua uses a rule to write the following sequence of numbers.

$\frac{1}{6}, \frac{1}{2}, \frac{5}{6}, \underline{\hspace{1cm}}, \frac{11}{2}$

What rule did Joshua use?
 add $\frac{1}{3}$

What is the missing number in the sequence?
 $\frac{1}{6}$

4. For numbers 4a–4c, tell whether each expression was rewritten using the Commutative Property or the Associative Property. Choose the correct property of addition.

4a. $\frac{1}{6} + \left(\frac{7}{8} + \frac{5}{6}\right) = \frac{1}{6} + \left(\frac{5}{6} + \frac{7}{8}\right)$

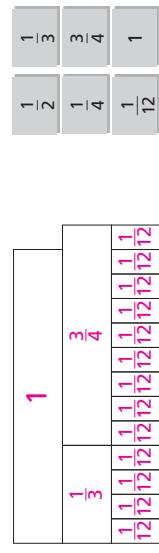

4b. $\left(\frac{7}{10} + \frac{1}{3}\right) + \frac{1}{10} = \left(\frac{1}{3} + \frac{7}{10}\right) + \frac{1}{10}$

4c. $\left(6\frac{2}{5} + 4\frac{4}{9}\right) + 3\frac{2}{9} = 6\frac{2}{5} + \left(4\frac{4}{9} + 3\frac{2}{9}\right)$

Name _____

5. Jeffrey walked $\frac{1}{3}$ mile on Monday and jogged $\frac{3}{4}$ mile on Tuesday. How far did he walk and jog on Monday and Tuesday combined?

Use the tiles to complete the fraction strip model to show how you found your answer. The fractions may be used more than once or not at all.

$\frac{11}{12}$ mile(s)

6. Each week, Tom exercises $\frac{4}{5}$ hour on Mondays and $\frac{5}{6}$ hour on Fridays.

Part A

Complete the calculations below to write equivalent fractions with a common denominator. **Possible answers given.**

$$\frac{4}{5} = \frac{4 \times 6}{5 \times 6} = \frac{24}{30}$$

$$\frac{5}{6} = \frac{5 \times 5}{6 \times 5} = \frac{25}{30}$$

Part B

How much time does Tom spend exercising on Monday and Friday each week? Explain how you found your answer.

Possible answer: To find the total amount of time spent exercising, I added the numerators and kept the same denominator to find $\frac{24}{30} + \frac{25}{30} = \frac{49}{30}$. Then I regrouped $\frac{49}{30}$ as 1, leaving $\frac{19}{30}$ left over. I wrote the answer as $1\frac{19}{30}$.

Part C

Last week, Tom spent $\frac{1}{10}$ hour less time than normal exercising. How much time did Tom spend exercising last week? Explain.

Possible answer: I changed $\frac{1}{10}$ to $\frac{3}{30}$. I then subtracted $\frac{3}{30}$ from the sum of the other 2 fractions. $1\frac{19}{30} - \frac{3}{30} = 1\frac{16}{30}$.

Practice Test

Name _____

Practice Test

5.NF.A.2
 Use equivalent fractions as a strategy
 to add and subtract fractions.

Name _____

1. The shaded part of the diagram shows what portion of a full meter of string Genie has. She will use $\frac{3}{5}$ meter of string to make bracelets. How much of the string will she have left after making the bracelets?

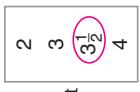

- (A) $\frac{1}{10}$ meter
 (B) $\frac{3}{10}$ meter
 (C) $\frac{3}{5}$ meter
 (D) $\frac{6}{5}$ meter

2. Sophia babysat for $3\frac{7}{12}$ hours on Friday. She babysat for $2\frac{5}{6}$ hours on Saturday. For numbers 2a–2c, estimate how long Sophia babysat on Friday and Saturday combined. Choose the correct benchmarks and sum.

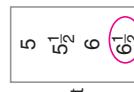

hours on Friday.

- 2a. Sophia babysat for about $3\frac{1}{2}$ hours on Saturday.

- 2b. Sophia babysat for about $2\frac{1}{2}$ hours on Friday and Saturday combined.

**Practice Test**

Name _____

3. Four students spent time volunteering last weekend. The table shows how much time each student spent volunteering.

Volunteering

Student	Time (in hours)
Amy	$4\frac{5}{6}$
Beth	$6\frac{1}{2}$
Victor	$5\frac{3}{4}$
Cal	$5\frac{2}{3}$

Match each pair of students with the difference between how much time they spent volunteering.

4. Rodrigo practiced playing the guitar $15\frac{1}{3}$ hours over the past 3 weeks. He practiced for $6\frac{1}{4}$ hours during the first week and $4\frac{2}{3}$ hours during the second week. How much time did Rodrigo spend practicing during the third week? Use the numbers and symbols to write an equation that represents the problem. Then solve the equation. Symbols may be used more than once or not at all.

$$15\frac{1}{3} \quad 6\frac{1}{4} \quad 4\frac{2}{3} \quad x \quad = \quad +$$

Possible answer: $15\frac{1}{3} = 6\frac{1}{4} + 4\frac{2}{3} + x$

Practice time during third week: $4\frac{5}{12}$ hours

Practice Test

Name _____

Practice Test

- 5.NF.B.3**
Apply and extend previous understandings of multiplication and division to multiply and divide fractions.
- Samuel needs 233 feet of wood to build a fence. The wood comes in lengths of 11 feet.

Part A

How many total pieces of wood will Samuel need? Explain your answer.

22 pieces; Possible explanation: I need to divide 233 by 11. The answer is $21\frac{2}{11}$. Since Samuel can't buy a partial piece of wood, I need to add 1 to the quotient. So, the final answer is 22.

Part B

Theresa needs twice as many feet of wood as Samuel. How many pieces of wood does Theresa need? Explain your answer.

43 pieces of wood; Possible explanation: Twice the length of 233 feet is 466 feet. If I divide 466 by 11, the answer is $42\frac{4}{11}$. Theresa needs to buy 43 pieces of wood.

- Twelve pounds of beans are distributed equally into 8 bags to give out at the food bank. How many pounds of beans are in each bag?

$$\frac{3}{2} \text{ or } 1\frac{1}{2} \text{ pounds}$$

- Five friends share 3 bags of trail mix equally. What fraction of a bag of trail mix does each friend get?

Each friend will receive $\frac{3}{5}$ of a bag of trail mix.

- Zoe has 5 cucumbers she grew in her garden. She wants to share them equally among 4 of her neighbors. How many cucumbers will each neighbor receive? Use the numbers on the tiles to complete the number sentence. You may use a number more than once or not at all.

$$\begin{array}{|c|c|c|} \hline 1 & 2 & 3 \\ \hline \end{array} \quad \begin{array}{|c|c|c|} \hline 5 & 4 & \\ \hline \end{array} = \begin{array}{|c|c|c|} \hline 1 & & 1 \\ \hline \end{array} \quad \begin{array}{|c|c|c|} \hline & & 4 \\ \hline \end{array}$$

**Practice Test**

Name _____

- Steve is buying apples for the fifth grade. Each bag holds 12 apples. If there are 75 students total, how many bags of apples will Steve need to buy if he wants to give one apple to each student?

$$7 \text{ bags}$$

- Russ and Vickie are trying to solve this problem: There are 146 students taking buses to the museum. If each bus holds 24 students, how many buses will they need?

Russ says the students need 6 buses. Vickie says they need 7 buses. Who is correct? Explain your reasoning.

Vickie is correct. The answer to the problem is $6\frac{2}{24}$. This means that there are 6 full buses of students and 2 extra students. Those 2 students must also travel by bus to the museum; so, an extra bus is needed, making the total 7 buses.

- Seven friends picked 7 quarts of blueberries. Three of the friends will share 4 quarts of blueberries equally, and the other 4 friends will share 3 quarts of the blueberries equally. In which group does each friend get a greater amount of blueberries? Explain your reasoning.

The group of 3 friends will get a greater amount of blueberries. Possible explanation: $4 \div 3 = \frac{4}{3}$ and $3 \div 4 = \frac{3}{4}$

$$\frac{4}{3} = 1\frac{1}{3}$$

$$\frac{3}{4} > \frac{1}{3}$$

- Nine friends share 3 pumpkin pies equally. What fraction of a pumpkin pie does each friend get?

$$\text{Each friend will get } \frac{3}{9} \text{ or } \frac{1}{3} \text{ of a pumpkin pie.}$$

Practice Test

Name _____

Practice Test

Name _____

5.NF.B.4a
 Apply and extend previous understandings of multiplication and division to multiply and divide fractions.

1. Mrs. Williams is organizing her office supplies. There are 3 open boxes of paper clips in her desk drawer. Each box has $\frac{7}{8}$ of the paper clips remaining. How many boxes of paper clips are left? Shade the model and complete the calculations below to show how you found your answer.

$$3 \times \frac{7}{8} = \frac{\boxed{21}}{8} = \frac{2\frac{5}{8}}{8} \text{ full boxes of paper clips}$$

2. Logan bought 15 balloons. Four-fifths of the balloons are purple. How many of the balloons are purple? Draw a model to show how you found your answer.

Possible answer:

12 purple balloons

3. Taniqua took a test that had 20 multiple-choice questions and 10 True/False questions. She got $\frac{9}{10}$ of the multiple-choice questions correct, and she got $\frac{4}{5}$ of the True/False questions correct.

- 3a. How many multiple-choice questions did Taniqua get correct?

18 multiple-choice questions

- 3b. How many True/False questions did Taniqua get correct?

8 True/False questions

Practice Test

Name _____

4. Frannie put $\frac{2}{3}$ of her music collection on an mp3 player. While on vacation, she listened to $\frac{3}{5}$ of the music on the player. How much of Frannie's music collection did she listen to while on vacation? For numbers 4a–4d, choose the correct values to describe how to solve the problem.

- 4a. Draw a rectangular array with 3 rows and 4 columns.

- 4b. Shade $\frac{1}{3}$ of the rows gray.

- 4c. Shade $\frac{3}{6}$ of the gray squares black.

- 4d. Frannie listened to $\frac{2}{5}$ of her music collection while on vacation.

5. In a fifth grade class, $\frac{4}{5}$ of the girls have brown hair. Of the brown-haired girls, $\frac{3}{4}$ of them have long hair. Of the girls with long brown hair, $\frac{1}{3}$ of them have green eyes.

Part A

- What fraction of the girls in the class have long brown hair?

$\frac{3}{5}$ of the girls

Part B

- What fraction of the girls in the class have long brown hair and green eyes?

$\frac{1}{5}$ of the girls

Name _____

5.NF.B.4b
Apply and extend previous understandings of multiplication and division to multiply and divide fractions.

1. Caleb's family room has the dimensions shown. He needs to find the area of the room so that he knows how much carpet to buy. Complete the area model below to find the area of the family room.

$$\begin{array}{r} 5 + \frac{1}{4} \\ \hline 3 \quad 3 \times 5 = 15 \\ + \quad \quad \quad 3 \times \frac{1}{4} = \frac{3}{4} \\ \hline 7 \quad \frac{7}{8} \times \frac{1}{4} = \frac{7}{32} \\ \hline \frac{7}{8} \times 5 = \frac{43}{8} \end{array}$$

area of the room = $\frac{20}{32}$ square yards

2. Louis wants to carpet the rectangular floor of his basement. The basement has an area of 864 square feet. The width of the basement is $\frac{2}{3}$ its length. What is the length of Louis's basement?

36 _____ feet

3. A postcard has an area of 24 square inches. Two enlargements of the postcard have areas of 54 square inches and 96 square inches. In each postcard, the length is $1\frac{1}{2}$ times the width. Which of the following could be the dimensions of the postcard or one of the enlargements? Mark all that apply.

- A 6 inches by 9 inches
- B 10 inches by 15 inches
- C 4 inches by 6 inches
- D 6 inches by 12 inches
- E 8 inches by 12 inches

4. The Gilberts are designing a rectangular patio. The patio has an area of 432 square feet. The width of the patio is $\frac{3}{4}$ its length. What is the length of the patio?

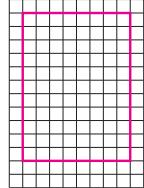

24 _____ feet

Name _____

5. Peggy is making a quilt using panels that are $1\frac{1}{2}$ foot by $1\frac{1}{2}$ foot. The quilt is $5\frac{1}{2}$ feet long and 4 feet wide.

Part A

Let each square of the grid below represent $\frac{1}{2}$ foot by $\frac{1}{2}$ foot. Draw a rectangle on the grid to represent the quilt.

Possible answer:

- What is the area of the quilt? Explain how you found your answer.
 22 _____ square feet

Possible explanation: There are 8 rows and 11 columns of squares, for a total of $8 \times 11 = 88$ squares. Each square represents an area of $\frac{1}{2} \times \frac{1}{2} = \frac{1}{4}$ square foot. So, the area of the quilt is $88 \times \frac{1}{4} = 22$ square feet.

Part B

6. An area rug has an area of 48 square feet. Two similar rugs have areas of 108 square feet and 192 square feet. In each rug, the length is $1\frac{1}{3}$ times the width. Which of the following could be the dimensions of one of the area rugs? Mark all that apply.

- A 6 feet by 8 feet
- B 10 feet by 18 feet
- C 9 feet by 12 feet
- D 12 feet by 16 feet
- E 4 feet by 12 feet

Name _____

5.NF.B.5b
Apply and extend previous understandings of multiplication and division to multiply and divide fractions.

1. A scientist had $\frac{3}{5}$ liter of solution. He used $\frac{1}{6}$ of the solution for an experiment. How much solution did the scientist use for the experiment? Use the numbers on the tiles to complete the calculation. You may use numbers more than once or not at all.

$$\frac{3}{5} \times \frac{1}{6} = \frac{\boxed{1}}{\boxed{6}} = \frac{\boxed{3}}{\boxed{30}} = \frac{\boxed{1}}{\boxed{10}} = \frac{\boxed{6}}{\boxed{6}} = \frac{\boxed{1}}{\boxed{1}} = \frac{\boxed{2}}{\boxed{2}} = \frac{\boxed{3}}{\boxed{10}} = \frac{\boxed{1}}{\boxed{30}}$$

$\frac{1}{10}$ liter

2. For numbers 2a–2d, without multiplying, use the symbols from the list on the right to indicate that the product will compare with the factor. Symbols can be used more than once.

2a. $\frac{13}{4} \times \frac{5}{8} = x$
 2b. $\frac{4}{3} \times 6 = x$
 2c. $\frac{2}{5} \times \frac{1}{7} = x$
 2d. $\frac{5}{8} \times \frac{7}{7} = x$

$x \quad \frac{5}{8}$
 $x \quad \frac{13}{4}$
 $x \quad \frac{4}{3}$
 $x \quad \frac{2}{5}$
 $x \quad \frac{1}{7}$
 $x \quad \frac{7}{7}$

5. Without multiplying, classify each product as being less than $\frac{2}{3}$, equal to $\frac{2}{3}$, or greater than $\frac{2}{3}$. Write the letter of each expression under the correct category.

A $\frac{2}{3} \times \frac{1}{5}$	B $\frac{2}{3} \times \frac{8}{5}$	C $\frac{2}{3} \times \frac{9}{9}$	D $\frac{2}{3} \times \frac{6}{1}$	E $\frac{2}{3} \times \frac{8}{9}$	F $\frac{2}{3} \times 2$
Less Than $\frac{2}{3}$ A, E	Equal to $\frac{2}{3}$ C	Greater Than $\frac{2}{3}$ B, D, F			

6. For numbers 6a–6d, without multiplying, use the symbols from the list on the right to indicate how the product will compare with the factor. Symbols can be used more than once.

6a. $\frac{3}{4} \times \frac{15}{7} = x$
 6b. $7 \times \frac{6}{5} = x$
 6c. $\frac{8}{9} \times \frac{1}{5} = x$
 6d. $\frac{8}{8} \times \frac{7}{10} = x$

$x \quad \frac{3}{4}$
 $x \quad \wedge$
 $x \quad \wedge$
 $x \quad \vee$
 $x \quad \wedge$
 $x \quad \vee$
 $x \quad \parallel$

7. $\frac{6}{13} \times \frac{3}{4} = x$
 8. $\frac{4}{7} \times \frac{5}{3} = x$

$\vee \quad \wedge \quad \parallel$
 $\vee \quad \wedge \quad \parallel$
 $\vee \quad \wedge \quad \parallel$

9. $\frac{5}{9} \times \frac{3}{3} = x$

5.NF.B.6
 Common Core State Standard
Apply and extend previous understandings of multiplication and division to multiply and divide fractions.

1. Kayla walks $3\frac{2}{5}$ miles each day. Which of the following statements correctly describe how far she walks? Mark all that apply.

- (A) Kayla walks $14\frac{2}{5}$ miles in 4 days.
 (B) Kayla walks $23\frac{4}{5}$ miles in 7 days.
 (C) Kayla walks 34 miles in 10 days.
 (D) Kayla walks $102\frac{2}{5}$ miles in 31 days.

2. The table shows how many hours some of the part-time employees at the toy store worked last week.

Name	Hours Worked
Conrad	$6\frac{2}{3}$
Giovanni	$9\frac{1}{2}$
Sally	$10\frac{3}{4}$

This week, Conrad will work $1\frac{3}{4}$ times longer than last week. Giovanni will work $1\frac{1}{3}$ times longer than last week. Sally will work $2\frac{2}{3}$ times the number of hours she worked last week. Match each employee's name to the number of hours he or she will work this week.

Employee

Employee	Hours This Week
Conrad	$7\frac{1}{6}$
Giovanni	$12\frac{2}{3}$
Sally	$11\frac{2}{3}$

3. Jake wrote 4 equations on the board. Which of Jake's equations are correct? Mark all that apply.

- (A) $\frac{3}{5} \times \frac{2}{7} = \frac{21}{16}$
 (B) $\frac{2}{9} \times \frac{5}{3} = \frac{10}{27}$
 (C) $\frac{7}{8} \times \frac{5}{9} = \frac{35}{72}$
 (D) $\frac{1}{2} \times \frac{3}{5} = \frac{4}{10}$

Practice Test

Name _____

4. Jessica is creating a banner that will be $\frac{2}{5}$ meter wide. Which statements correctly describe the area her banner will be for each length? Mark all that apply.

- (A) A $\frac{2}{5}$ -meter-long banner will have an area of $\frac{4}{25}$ meter squared.
 (B) A $\frac{5}{8}$ -meter-long banner will have an area of $\frac{10}{25}$ meter squared.
 (C) A $\frac{3}{4}$ -meter-long banner will have an area of $\frac{6}{20}$ meter squared.
 (D) A $\frac{9}{10}$ -meter-long banner will have an area of $\frac{18}{100}$ meter squared.

5. The table shows how many bags of canned goods each class collected during the first week of a food drive.

Class	Bags of Canned Goods
4 th Graders	$3\frac{1}{2}$
5 th Graders	$2\frac{3}{4}$
6 th Graders	$3\frac{1}{4}$

Next week the 4th graders hope to collect $1\frac{1}{3}$ times as many bags of canned goods as the first week. The 5th graders' goal is to collect $1\frac{3}{4}$ times as many bags of canned goods as they collected in week 1. The 6th graders hope to collect $1\frac{1}{2}$ times as many bags of canned goods. Match each class to the number of bags of canned goods they hope to collect next week.

Class

Class	Next Week's Goal (bags)
4 th Graders	$4\frac{13}{16}$
5 th Graders	$4\frac{7}{8}$
6 th Graders	$4\frac{2}{3}$

Name _____

5.NF.B.7a
Apply and extend previous understandings of multiplication and division to multiply and divide fractions.

1. A builder has an 8-acre plot divided into $\frac{1}{4}$ -acre home sites. How many $\frac{1}{4}$ -acre home sites are there?

There are **32** home sites.

2. For numbers 2a–2e, write the number that makes the equation correct.

2a. $3 \div \frac{1}{4} =$ **12**

2b. $\square \div \frac{1}{2} = 14$

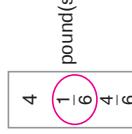

2c. $\frac{1}{5} \div 4 =$ **$\frac{1}{20}$**

2d. $\frac{1}{\square} \div 5 = \frac{1}{10}$

2e. $\frac{1}{7} \div 3 =$ **$\frac{1}{21}$**

3. Choose the numbers to create a story problem that represents $4 \div \frac{1}{6}$.

4 Bill bought $\frac{1}{6}$ pound(s) of cheese.

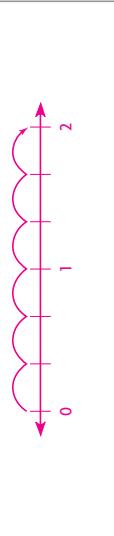

He made grilled cheese sandwiches and used $\frac{1}{6}$ pound(s) of cheese in each sandwich.

Bill made 24 sandwiches.

4. Divide. Draw a number line to show your work.

$2 \div \frac{1}{3} =$ **6**

Practice Test

5.NF.B.7b

Apply and extend previous understandings of multiplication and division to multiply and divide fractions.

1. Gabriel made 4 small meatloaves. He cut each meatloaf into fourths. How many $\frac{1}{4}$ -size pieces of meatloaf does Gabriel have? Draw lines in the model to find the answer.

Gabriel has **16** $\frac{1}{4}$ -size pieces of meatloaf.

2. Camilla has a $\frac{1}{2}$ pound of raisins that she will divide evenly into 5 bags. Shade the diagram to show the fractional part of a pound that will be in each bag.

3. A 6-mile walking trail has a distance marker every $\frac{1}{3}$ mile. How many markers are along the trail?

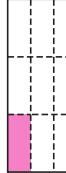

There are **18** markers along the trail.

4. Eric has 4 pieces of clay. He cut each piece of clay into thirds. How many $\frac{1}{3}$ -size pieces of clay does Eric have? Draw lines in the model to find the answer.

Eric has **12** $\frac{1}{3}$ -size pieces of clay.

5. Cecilia has $\frac{1}{3}$ pound of trail mix that she will divide equally into 3 bags. Shade the diagram to show the fractional part of a pound that will be in each bag.

Practice Test

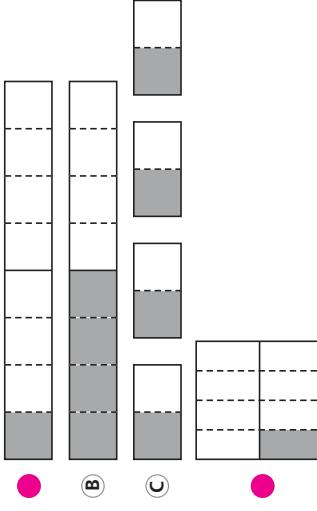

Name _____

6. Adrian made 3 granola bars. He cut each bar into fourths. How many $\frac{1}{4}$ -size pieces of granola bar does Adrian have? Draw lines in the model to find the answer.

Adrian has **12** one-quarter-size pieces of granola bar.

7. Kyle made a loaf of banana bread. He gave equal portions of $\frac{1}{2}$ of the loaf to 4 friends. Which diagram could Kyle use to find the fraction of the loaf that each friend received? Mark all that apply.

8. Ben is making bread that calls for 5 cups of flour. His measuring cup only holds $\frac{1}{2}$ cup. How many times will Ben need to fill the measuring cup to get the 5 cups of flour? Mark all that apply.

Ben will need to fill the measuring cup 10 times.

9. Tina has $\frac{1}{2}$ quart of iced tea. She pours the same amount into each of 3 glasses. Which equation represents the fraction of a quart of iced tea that is in each glass? Mark all that apply.

- (A) $\frac{1}{2} \div \frac{1}{3} = n$ (B) $2 \div \frac{1}{3} = n$ (C) $2 \div \frac{1}{3} = n$ (D) $2 \times \frac{1}{3} = n$ (E) $2 \times \frac{1}{3} = n$

Practice Test

Name _____

Name _____

5.NF.B.7c
Apply and extend previous understandings of multiplication and division to multiply and divide fractions.

1. Maureen has $\frac{1}{4}$ pound of raisins. She divides the raisins into 4 servings. Each serving contains $\frac{1}{16}$ pound of raisins.

2. A giant tortoise can walk about $\frac{1}{10}$ meter per second on land. A cooter turtle can walk about $\frac{1}{2}$ meter per second on land.

Part A

- How long would it take a giant tortoise to travel 5 meters? Show your work.

$$5 \div \frac{1}{10} = 5 \times 10 = 50$$

It would take the giant tortoise 50 seconds to travel 5 meters.

Part B

- How much longer would it take a giant tortoise than a cooter turtle to travel 10 meters on land? Explain how you found your answer.

80 seconds longer; Possible explanation: First, I found the time it would take the giant tortoise to travel 10 meters: $10 \div \frac{1}{10} = 10 \times 10 = 100$, or 100 seconds. Then, I found the time it would take the cooter turtle to travel 10 meters: $10 \div \frac{1}{2} = 10 \times 2 = 20$, or 20 seconds. Then I subtracted $100 - 20 = 80$.

3. Dora buys one package each of 1-pound, 2-pound, and 4-pound packages of ground beef to make hamburgers.

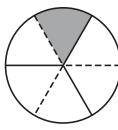

How many $\frac{1}{4}$ -pound hamburgers can she make? Show your work using words, pictures, or numbers.

Check students' work. 28 hamburgers; Possible explanation:
I found the total number of pounds of ground beef Dora bought: $1 + 2 + 4 = 7$. Then, I wrote a related multiplication expression to find $7 \div \frac{1}{4} = 7 \times 4 = 28$

Name _____

- Molly wrote the following equation to solve the problem: $2 \div \frac{1}{3} = n$. Do you agree with Molly's equation? Support your answer with information from the problem.

Part A

Noah drew this diagram to solve the problem. Can Noah use his diagram to find the fractional part of a pound of cherries that each person received? Support your answer with information from the problem.

Part B

Yes. Possible answer: Noah divided the circle into 3 equal parts to represent thirds. Then, he divided each third in half. He shaded half of $\frac{1}{3}$ of the circle. So, the diagram represents $\frac{1}{3} \div 2 = \frac{1}{3} \times \frac{1}{2} = \frac{1}{6}$. Since $\frac{1}{6}$ of the circle is shaded, Lisa and Frank will each get $\frac{1}{6}$ pound of cherries.

4. Mrs. Green wrote the following problem on the whiteboard: Lisa and Frank shared $\frac{1}{3}$ pound of cherries equally. What fractional part of a pound did each person receive?

(A) $\frac{1}{2} \div \frac{1}{4} = n$

(B) $\frac{1}{4} \times \frac{1}{2} = n$

(C) $2 \div \frac{1}{4} = n$

(D) $4 \div 2 = n$

(E) $\frac{1}{4} \div 2 = n$

(F) $2 \times \frac{1}{4} = n$

Practice Test

5.MD.A.1
*Convert like measurement units
 within a given measurement system.*

Name _____

1. The library is 5 miles from the post office. How many yards is the library from the post office?

8,800 yards

2. Billy made 3 gallons of juice for a picnic. He said that he made $\frac{3}{4}$ quart of juice. Explain Billy's mistake.

Possible explanation: Billy divided the number of gallons by 4 to convert to quarts. He should have multiplied the number of gallons by 4 to find the number of quarts in 3 gallons.
 $3 \times 4 = 12$ quarts

3. The Drama Club is showing a video of its recent play. The first showing begins at 2:30 P.M. The second showing is scheduled at 5:25 P.M. with a $\frac{1}{2}$ -hour break between the showings.

Part A

How long is the video in hours and minutes?

2 hours and **25** minutes

Part B

Explain how you can use a number line to find the answer.

Possible explanation: I can work backward from the start time of the second showing at 5:25. I count back $\frac{1}{2}$ hour, which is 30 minutes, for the break between showings to 4:55. Then, I can find the elapsed time between 2:30 and 4:55.

Part C

The second showing started 20 minutes late. Will the second showing be over by 7:45 P.M.? Explain why your answer is reasonable.

No. Possible explanation: The second showing started at 5:45 P.M. The movie lasts 2 hours 25 minutes, so it ends at 8:10 P.M., which is later than 7:45 P.M.

**Practice Test**

Name _____

4. Fred bought 4 liters of liquid laundry detergent, 3,250 milliliters of fabric softener, and 2.5 liters of bleach. Which statements are true? Mark all that apply.

- (A) Fred bought 75 milliliters more fabric softener than bleach.
- (B) Fred bought 1.75 liters more laundry detergent than bleach.
- (C) Fred bought 750 milliliters more fabric softener than bleach.
- (D) Fred bought 150 milliliters more laundry detergent than bleach.
- (E) Fred bought 0.75 liters more laundry detergent than fabric softener.

5. A male hippopotamus can weigh up to 10,000 pounds. How many tons is 10,000 pounds?

5 tons

6. Amar and his friends went to a movie at 4:45 P.M. The movie ended at 6:20 P.M.

Part A

How long was the movie?

1 hour(s) and **35** minutes

Part B

Amar got home 45 minutes after the movie ended. What time did Amar get home? Explain how you found your answer.

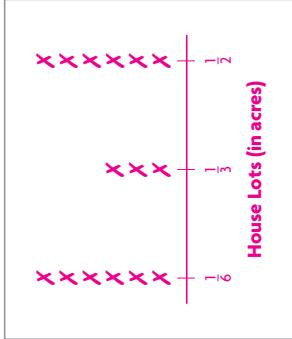

7:05 P.M.; Possible explanation: I need to find 45 minutes after 6:20 P.M. 6:20 to 7:00 is 40 minutes, so 5 minutes more is 7:05.

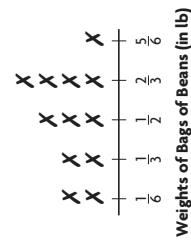

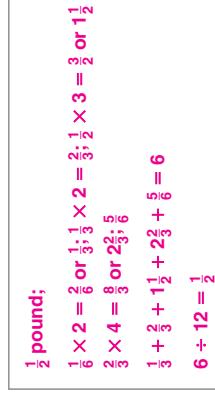

1. A builder is buying property to build new houses. The sizes of the lots are $\frac{1}{6}$, $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$, $\frac{1}{6}$, $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$, $\frac{1}{6}$, and $\frac{1}{3}$ acre. Organize the information in a line plot.

What is the average size of the lots?

$$\frac{1}{3} \text{ acre}$$

2. The line plot shows the weights of bags of beans. What is the average weight of the bags? Show your work.

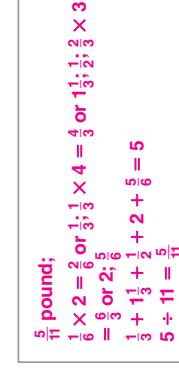

3. Amy filled bags with mixed nuts. The weights of the bags are $\frac{1}{8}$ -lb, $\frac{1}{4}$ -lb, $\frac{1}{8}$ -lb, $\frac{1}{2}$ -lb, $\frac{1}{8}$ -lb, $\frac{1}{4}$ -lb, $\frac{1}{2}$ -lb, $\frac{1}{8}$ -lb, $\frac{1}{2}$ -lb, $\frac{1}{8}$ -lb, $\frac{1}{4}$ -lb, $\frac{1}{2}$ -lb, $\frac{1}{8}$ -lb, $\frac{1}{4}$ -lb, $\frac{1}{2}$ -lb, and $\frac{1}{8}$ -lb. Organize the information in a line plot.

What is the average weight of the bags?

$$\frac{1}{4} \text{ pound(s)}$$

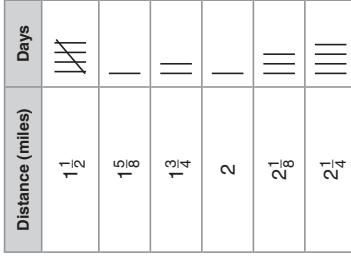

4. The line plot shows the weights of stones found in a stream. What is the average weight of the stones? Show your work.

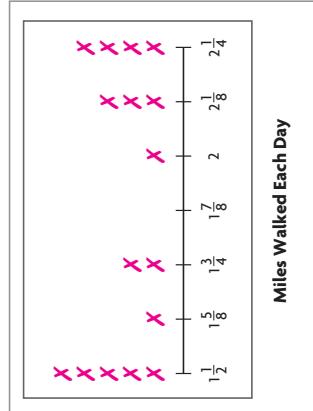

5. Mika records the number of miles she walks each day.

Part A

Graph Mika's results on the line plot.

Weights of Stones (in lb)

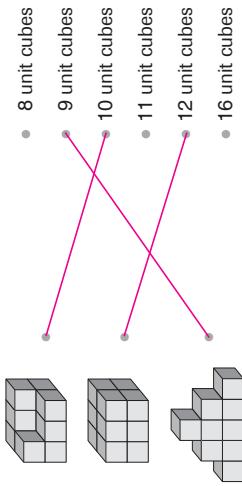

Part B

How many days did she walk and what was her total distance? Explain your thinking.

16 days for a total of 30 miles; Possible explanation:
I multiplied each distance by the number of dots above the distance in the line plot, and then I added the products.

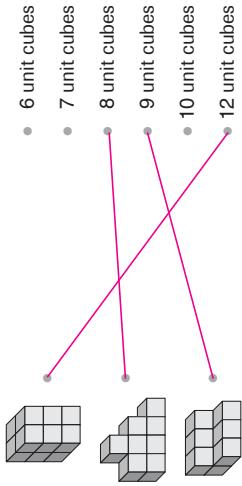

- 1.** Match the figure with the number of unit cubes that would be needed to build each figure. Not every number of unit cubes will be used.

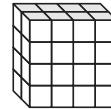

- 8 unit cubes
- 9 unit cubes
- 10 unit cubes
- 11 unit cubes
- 12 unit cubes
- 16 unit cubes
- 7 unit cubes
- 8 unit cubes
- 9 unit cubes
- 10 unit cubes
- 11 unit cubes
- 12 unit cubes
- 15 unit cubes

- 2.** Match the figure with the number of unit cubes that would be needed to build each figure. Not every number of unit cubes will be used.

- 6 unit cubes
- 7 unit cubes
- 8 unit cubes
- 9 unit cubes
- 10 unit cubes
- 12 unit cubes

- 3.** Bakari builds a rectangular prism using unit cubes.

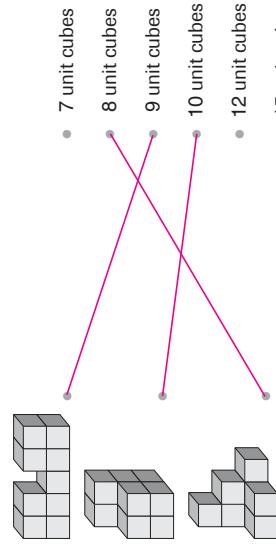

What is the volume of the prism? Explain your thinking.

32 cubic units; Possible explanation: There are 8 unit cubes on the bottom layer. Since there are 4 layers that each have 8 unit cubes, I multiplied 4 by 8 to get 32.

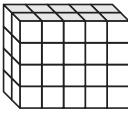

GO ON

- 4.** Match the figure with the number of unit cubes that would be needed to build each figure. Not every number of unit cubes will be used.

- 7 unit cubes
- 8 unit cubes
- 9 unit cubes
- 10 unit cubes
- 12 unit cubes
- 15 unit cubes

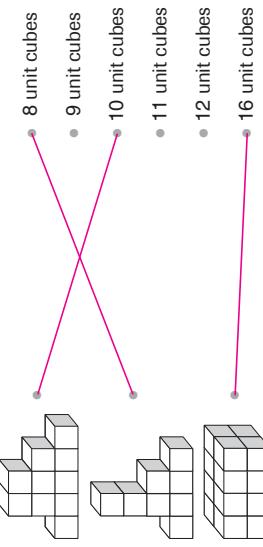

- 5.** Joo-Chan builds a rectangular prism using unit cubes.

What is the volume of the prism? Explain your thinking.

40 cubic units; Possible explanation: There are 8 unit cubes on the bottom layer. Since there are 5 layers each with 8 unit cubes, I multiplied 5 by 8 to get 40.

- 6.** Match the figure with the number of unit cubes that would be needed to build each figure. Not every number of unit cubes will be used.

- 8 unit cubes
- 9 unit cubes
- 10 unit cubes
- 11 unit cubes
- 12 unit cubes
- 16 unit cubes

5.MD.C.3b
 *Geometric measurement; understand concepts of volume and relate volume to addition.*

1. A shipping crate holds 20 shoeboxes. The dimensions of a shoebox are 6 inches by 4 inches by 12 inches. For numbers 1a–1c, write the number that makes the sentence true.
- Each shoebox has a volume of **288** cubic inches.
 - Each crate has a volume of about **5,760** cubic inches.
 - If the crate could hold 27 shoeboxes, the volume of the crate would be about **7,776** cubic inches.

2. A pack of folders has a length of 5 inches, a width of 12 inches, and a height of 1 inch. The pack of folders will be shipped in a box that holds 12 packs of folders. Which statements are true? Mark all that apply.
- Each pack of folders has a volume of 60 cubic inches.
 - The box has a volume of about 720 cubic inches.
 - If the box held 15 packs of folders, it would have a volume of about 1,200 cubic inches.
 - If the box held 20 packs of folders, it would have a volume of about 1,200 cubic inches.

3. A shipping crate holds 18 books. The dimensions of each book are 2 inches by 8 inches by 10 inches. For numbers 3a–3b, choose the number that makes the statement true.

- Each book has a volume of **160** cubic inches.
- Each crate has a volume of about **2,880** cubic inches.

Name _____

4. A shipping container holds 40 tissue boxes. The dimensions of a tissue box are 4 inches by 6 inches by 3 inches. Which statements are true? Mark all that apply.

- Each tissue box has a volume of 72 cubic inches.
- Each container has a volume of about 1,440 cubic inches.
- If a container could hold 48 tissue boxes, the volume of the container would be about 624 cubic inches.
- If a container has a volume of 3,000 cubic inches, 41 tissue boxes will fit in the container.

5. A shipping container holds 40 gift boxes. The dimensions of a gift box are 4 inches by 5 inches by 2 inches. For numbers 5a–5c, choose the number that makes the statement true.

- Each gift box has a volume of **40** cubic inches.
- Each container has a volume of about **1,200** cubic inches.
- If a container could hold 50 tissue boxes, the volume of the container would be about **1,600** cubic inches.

Graph points on the coordinate plane to solve real-world and mathematical problems.

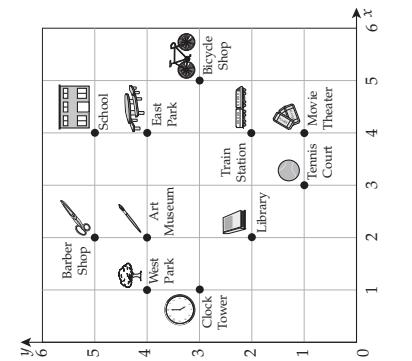

1. The letters on the coordinate grid represent the locations of the first four holes on a golf course. Which of the following accurately describes the location of a hole? Mark all that apply.

- (A) Hole U is 4 units left and 4 units down from hole S .
 (B) Hole F is 1 unit right and 7 units down from hole U .
 (C) Hole T is 2 units left and 4 units up from hole S .
 (D) Hole S is 3 units left and 5 units up from hole F .

2. Lindsey made a map of her town. Match each location below with the correct ordered pair that marks it on the coordinate grid. Not every ordered pair will be used. Not every ordered pair will be used.

- Clock Tower (4, 4)
 Art Museum (1, 3)
 East Park (5, 4)
 Movie Theater (2, 4)
 School (4, 2)
 Tennis Court (3, 1)
 Library (4, 5)

3. Lucy's house is located at the point shown on the coordinate grid. Ainsley's house is located 2 units right and 3 units down from Lucy's house. Plot a point on the coordinate grid to represent the location of Ainsley's house.

What ordered pair represents the location of Lucy's house?

(3, 5)

What ordered pair represents the location of Ainsley's house?

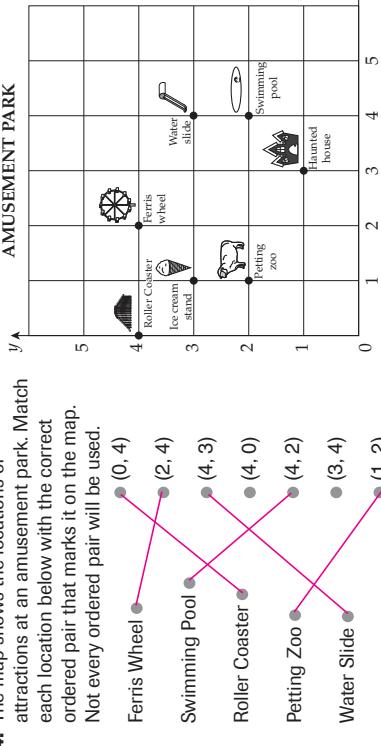

(5, 2)

5.G.A.2

 Graph points on the coordinate plane to solve real-world and mathematical problems.

1. For 6 days in a row, Julia measured the depth of the snow in a shaded area of her backyard. The line graph shows her data. Between which two days did the depth of the snow decrease the most?

between Day **5** and Day **6**

2. The table shows how much a puppy weighs from the age of 1 month old to the age of 5 months old.

Puppy's Weight					
Age (in months)	1	2	3	4	5
Weight (in pounds)	12	18	23	31	34

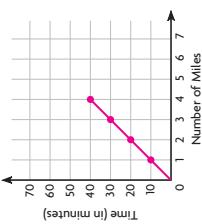

What ordered pairs would you plot to show the puppy's weight on a coordinate grid? How do you think the ordered pairs would be different if the puppy's weight was measured every week instead of every month? Explain your reasoning.

(1, 12), (2, 18), (3, 23), (4, 31), (5, 34); Possible answer:
There would be many more ordered pairs since there would be several weight measurements per month.
Also, the puppy's weight would not increase as fast since it would not gain as much weight in a week as it does in a month.
